# FOREWORD

Ladies and Gentlemen,

I am pleased to say that 2022 was another successful year for us. Although it was again full of challenges, during which the global situation had a significant impact on a number of branches, we were able to successfully overcome all challenges thanks to our excellent teamwork.

We can be proud of continuing to build long-term business relationships with customers who are world leaders in the construction, woodworking and manufacturing industries, CNC machine tools and textile machinery. These customers demand flawless quality. That's why we strive to continuously innovate our manufacturing processes and invest in modern technologies.

In 2021, we invested in the purchase of new technologies, such as a laser cutting machine or a robotic welding workstation, which we put into production in 2022.

In 2022, we continued to invest in expanding and upgrading our technical equipment and the development of our employees' skills. The sixth lead worker from our company has graduated from the prestigious Industrial Professional Academy.

The most significant investment project in 2022 was the construction and launch of a new powder coating plant.

2022 was also the year of further development of our cooperation with new customers and the introduction of many new products into production.

I would like to thank all our employees for the work they have contributed to the results of 2022. And thank you also to our customers and partners for the excellent cooperation.

**Ing. Šárka Kotrbová**

Managing Director

Precise in every detail.

# ABOUT THE COMPANY

---

The company Elitex Nepomuk a.s. is a Czech manufacturing company with a rich history in precision engineering production. It provides its customers with comprehensive services including sheet metal cutting and processing, machining, welding, surface treatment and assembly. It has 7 production halls and employs more than 200 people. It specialises in the manufacture of products for construction, woodworking, CNC machine tools and textile machinery. The company has long-standing partnerships with leading global manufacturers in these fields, such as Caterpillar, Hamm, Homag Group, Trumpf, Chiron, Heller, Unac and Rieter.

## Company

Elitex Nepomuk, a.s.  
registered in the Commercial Register kept at Regional Court in Pilsen,  
section B, insert 621, date of registration 1 August 1997:

### NAME

Elitex Nepomuk, a.s.

### LOCATION

Železniční 339, Dvorec, 335 03 Nepomuk

### ID NR.

25212567

### COMPANY BODIES

Management board

# REFERENCES

The company has been long term specialised in engineering production and cooperates closely with leading European and global partners. It places great emphasis on creating stable and lasting partnerships. It produces components and assemblies for construction, woodworking, textile and CNC machine tools.

A row of white electronic equipment units, possibly power supplies or converters, are lined up in a warehouse or factory setting. Each unit has a vertical white tube on top. The background shows industrial shelving and various items, including a blue bag and cardboard boxes.

# **2022 PROJECTS**

# NEW POWDER COATING PLANT

---

The most significant investment project of 2022 was the launch of new powder coating plant. The powder coating must meet our high quality standards for our customers.

As a result, a total of 3 powder coating lines are now in operation. The paint shop was acquired with the support of a subsidy program "Energy Saving" for a project with "Realization of energy savings II in Elitex Nepomuk a.s.", registration number CZ.01.3.10/0.0/0.0/20\_370/0025722, department 00100001100001.

Precise in every detail.

# HANGING BLASTING EQUIPMENT

---

In 2022, the Optima New blast machine with blast wheels was purchased. The equipment is designed for blasting parts suspended on rotating and moving hook. The abrasive is thrown onto the rotating and moving parts at the same time from below and above, thereby striking the entire surface of the part in one blast cycle.

# FILTRATION TOWER

---

A filtration tower TigTower 1200 was purchased. The filtration tower is primarily designed for the extraction of welding fumes and is an alternative extraction of welding areas, in particular where there is a high flexibility of individual workstations.

# FORKLIFT

---

For material handling, an additional forklift Toyota 02-8FDF18 with diesel engine was purchased. It has a lifting capacity of 1750 kg and is equipped with a lifting device in duplex version with a height of 3300 mm. The equipment of this lift includes pneumatic tyres which absorb shocks and therefore the movement is possible even on uneven surface.

# CURING GAS FURNACE

---

A new curing furnace for powder coating was purchased. The hardening ovens are used for hardening powder paints. The loading system of the parts into the oven is by means of ceiling rails. To maintain an even temperature inside the oven at all times air circulation is ensured throughout the entire curing process.

# AKADEMY INDUSTRIAL PROFESSIONAL

The professional qualification of employees is one of the company's top priorities.

In 2022, the head of technical production preparation successfully completed the "Industrial Professional" Academy course which ended with a certificate IHK-Akademie in Ostbayern and Czech-German Chamber of Commerce and Industry.

6 managers have already graduated in the last 5 years in long-term project training for the development of professional qualifications in cooperation with the Czech-German Chamber of Commerce.

# 2023 PLANS

The main plan for next year is to build a new production hall, to which will be extended the welding workplaces and storage facilities.

---

In addition, another plan for the coming year is the reconstruction of wastewater treatment plant, which will contribute to the sustainability and environmental responsibility of the company.
